APPENDIX

Model Regulation Service – April 1999

SELECT MORTALITY FACTORS

This appendix contains tables of select mortality factors that are the bases to which the respective percentage of Section 5A(2), 5B(2) and 5B(3) are applied.

The six tables of select mortality factors contained herein include: (1) male aggregate, (2) male nonsmoker, (3) male smoker, (4) female aggregate, (5) female nonsmoker, and (6) female smoker.

These tables apply to both age last birthday and age nearest birthday mortality tables.

For sex-blended mortality tables, compute select mortality factors in the same proportion as the underlying mortality. For example, for the 1980 CSO-B Table, the calculated select mortality factors are eighty percent (80%) of the appropriate male table in this Appendix, plus twenty percent (20%) of the appropriate female table in this Appendix.

Table with 22 columns and 22 rows of numerical data, likely representing values for different ages or durations. The rows are numbered 63 to 85+.

Female, Non-Smoker

Detailed table with 'Issue' and 'Duration' headers, and columns for 'Age' and numerical values from 1 to 20+. This table provides the underlying data for the first table above.
