

4501-45-01

General provisions.

- (A) Each application for certification shall be for only one model or type of ignition interlock device. A manufacturer shall make separate applications for models or types of devices that differ in any operational aspect.
- (B) If a manufacturer makes operational modifications to an ignition interlock device that is already certified, the manufacturer shall immediately notify the department of the modifications in writing and include a certified copy of any testing protocols submitted to an independent testing laboratory and the results thereof. The department will then determine whether the current certification applies to the device as modified, or whether the manufacturer must apply for a separate certification.
- (C) The director's certification shall continue until the manufacturer requests the department in writing to discontinue the certification, or until the department informs the manufacturer in writing that the certification is suspended or revoked.
- (D) The director may deny, suspend, or revoke the certification of an ignition interlock device for the following reasons:
- (1) The device, or modified device, fails to meet the requirements listed in rule 4501-45-03 of the Administrative Code;
 - (2) The manufacturer's product liability insurance is canceled or not renewed;
 - (3) The manufacturer is no longer in the business of manufacturing ignition interlock devices.
