The rules in this package regulate the processing of fish and fishery products in the

state of Ohio. Without proper safeguards, errors in the manufacturing process can result in the growth of highly dangerous pathogens such as Clostridium botulinum, E. coli 0157:H7, Salmonella, and Listeria monocytogenes. These bacteria can result in human illnesses including respiratory problems, pneumonia, diarrhea, vomiting, and in some cases can result in the death of the infected individual. Due to this high level of risk there is significant regulation to monitor the food production industry which is designed to prevent illness and protect consumers. These rules contained in this package mirror federal regulations in order to allow Ohio's producers of fish and fishery products to be able to ship all across the country.

901:3-7-07 states that all processors shall have and implement a sanitation standard operating procedure. This procedure addresses sanitation controls at all points in the production line including, water sanitation, cross contamination of other insanitary objects (i.e. utensils, food packaging material, gloves, and clothing), and control of employee health conditions. The rule is being amended to add the word #sanitary# to clarify the rule.
