CSI - Ohio The Common Sense Initiative

Business Impact Analysis

Agency Name: Ohio Department of Agriculture	
Regulation/Package Title: Plant Health – Invasive Pl	lants
Rule Number(s): 901:5-30-(01 and 02)	
Date: <u>June 20, 2017</u>	
Rule Type:	
X New	☐ 5-Year Review
□ Amended	☐ Rescinded

The Common Sense Initiative was established by Executive Order 2011-01K and placed within the Office of the Lieutenant Governor. Under the CSI Initiative, agencies should balance the critical objectives of all regulations with the costs of compliance by the regulated parties. Agencies should promote transparency, consistency, predictability, and flexibility in regulatory activities. Agencies should prioritize compliance over punishment, and to that end, should utilize plain language in the development of regulations.

77 SOUTH HIGH STREET | 30TH FLOOR | COLUMBUS, OHIO 43215-6117 <u>CSIOhio@governor.ohio.gov</u>

BIA p(179120) pa(318509) d: (691732) print date: 08/02/2025 3:13 AM

Regulatory Intent

1. Please briefly describe the draft regulation in plain language.

Please include the key provisions of the regulation as well as any proposed amendments.

The rules contained in this chapter establish a list of invasive plants in the state of Ohio. Invasive plants are plant species that are not native to Ohio whose introduction causes or is likely to cause economic or environmental harm or harm to human health as determined by scientific studies. Invasive plants do not include cultivated plants grown as food or livestock feed in accordance with generally accepted agricultural practices, including all plants authorized by the Animal and Plant Health Inspection Service in the U.S. Department of Agriculture.

Am. Sub S.B. 192 of the 130th General Assembly granted the Ohio Department of Agriculture (Department) the exclusive authority to regulate invasive plant species including identification of species and establishment of prohibited activities, and authorizes the Department to adopt rules for that purpose.

After nearly two years of stakeholder outreach, the rules proposed establish a list of invasive plants for sale in the state of Ohio is prohibited. Further, the rules establish an Ohio Invasive Plant Advisory Committee which will provide advice to the Director on matters regarding invasive plants, including but not limited to the identification of invasive plants and the establishment of prohibited activities regarding those species.

In order to allow businesses which may have invested time and resources into growing some of these plants, the Department has built in a grace period for the prohibition to take effect. This will allow these businesses time to recoup costs that were already invested and to develop alternative plants to market as replacements.

- 2. Please list the Ohio statute authorizing the Agency to adopt this regulation. Revised Code 901.50
- 3. Does the regulation implement a federal requirement? Is the proposed regulation being adopted or amended to enable the state to obtain or maintain approval to administer and enforce a federal law or to participate in a federal program?

 No.
- 4. If the regulation includes provisions not specifically required by the federal government, please explain the rationale for exceeding the federal requirement.

 Not applicable.

5. What is the public purpose for this regulation (i.e., why does the Agency feel that there needs to be any regulation in this area at all)?

The Department is statutorily tasked with the exclusive authority to regulate invasive plant species including identification of species and establishment of prohibited activities, and authorizes the Department to adopt rules for that purpose. By establishing this prohibition, the Department is helping to protect Ohio's native plant life and biodiversity.

6. How will the Agency measure the success of this regulation in terms of outputs and/or outcomes?

The Department will inspect nurseries for the sale of the prohibited plants. The rules will be judged as being successful when inspections and investigations find few violations of the prohibition.

Development of the Regulation

7. Please list the stakeholders included by the Agency in the development or initial review of the draft regulation.

If applicable, please include the date and medium by which the stakeholders were initially contacted.

The following stakeholders comprise a list of the leaders of several agricultural organizations found within the state of Ohio. Each stakeholder was given a copy of the rules contained in this package and asked to submit comments to the Department. The stakeholders contacted are as follows:

Organization	First	Last
Appalachian Ohio Weed Control Partnership	Eric	Boyda
Cincinnati Nature Center	Cory	Christopher
Cincinnati Wildflower Preservation Society	Christine	Hadley
Citizen Concerned About Bamboo	Carrigan	Pamela

8. What input was provided by the stakeholders, and how did that input affect the draft regulation being proposed by the Agency?

The Department received a wide range of input from the stakeholders, much of which impacted the final proposed rule. Based on this input, the Department added plants to the list, removed plants from the list, added a phase out period for particular plants, and amended the composition of the Advisory Committee.

For example, the Ohio Farm Bureau indicated that two species which were originally on the prohibited plants list, specifically Smooth Brome and Reed Canary Grass, are actually utilized as pasture plantings for livestock feed. In accordance with ORC 901.50, plants grown as livestock feed are prohibited from being included on the list. Therefore, the Department removed these plants from the proposed rule. Further, after many requests from many land managers, parks districts, university personnel, and some nursery owners, Callery Pear and Chinese Silvergrass were added to the list, but phase out periods were created to account for those businesses with existing inventories of these species.

The original proposed rule sent to stakeholders provided a seat on the advisory committee for "a professor of an agriculture or natural resources department of a college or university located in this state." Several stakeholders commented stating that other college departments or specialties should be included in this position. The Department amended this provision to now state, "a member of academia with knowledge of invasive plants and horticulture employed at a college or university located in this state." The Department believes that the provision will be broad enough in order to ensure that a person knowledgeable of the subject at hand will be on the committee.

As stated above, the Department received a wide range of comments including calls for plants to be added and removed. There were calls to both add and remove many of the same plants. With such conflicting opinions, the Department often elected to remove the plant from the list. The Department intends to have the Advisory Committee review these plants in more detail. Advisory committee review will allow a more robust scientific and economic discussion of the particular plant.

In conclusion, the Department believes the rules as proposed best reflect the wide ranging views on this subject. Once effective, the Department and the Advisory Committee will continue to review plants for inclusion on this list in order to protect Ohio's native plants and biodiversity.

9. What scientific data was used to develop the rule or the measurable outcomes of the rule? How does this data support the regulation being proposed?

The Department is required to establish the list of prohibited plants as determined by "scientific studies." See ORC 901.50. In compiling this list, the Department met with many stakeholder groups to discuss the work already accomplished and information gathered with respect to invasive plants. Specifically, the Department met with the Ohio Invasive Plants Council (OIPC) which is a non-governmental organization dedicated to the identification and elimination of invasive plants in Ohio. The OIPC has developed an assessment protocol by utilizing scientific data to create a list of invasive plants in Ohio. Scientific data used by the

OIPC is collected from Ohio land managers and other informed sources. Upon comparison, nearly all of the plants listed in OAC 901:5-30-01 are on the OIPC invasive plant list. The Department also conducted a review of the approaches used by USDA and neighboring states, as well as the invasive plant species listed by those states with similar climates, and took that information into consideration.

10. What alternative regulations (or specific provisions within the regulation) did the Agency consider, and why did it determine that these alternatives were not appropriate? If none, why didn't the Agency consider regulatory alternatives?

As stated above, the Department received a wide variety of comments from interested stakeholders. The Department considered all of them individually and elected to proceed with the rule as proposed. Once established, the ODA Invasive Plants Advisory Committee will be able to review any scientific evidence presented and discuss whether additional plants should be added to the rule and whether phase out periods are appropriate.

11. Did the Agency specifically consider a performance-based regulation? Please explain.

Performance-based regulations define the required outcome, but don't dictate the process the regulated stakeholders must use to achieve compliance.

The rules contained in this package are performance based as they define the required outcome. It is up to the individual to comply with these regulations.

12. What measures did the Agency take to ensure that this regulation does not duplicate an existing Ohio regulation?

The Department is given the sole regulatory authority through Revised Code 901.50 to establish the list of invasive plants in the state of Ohio.

13. Please describe the Agency's plan for implementation of the regulation, including any measures to ensure that the regulation is applied consistently and predictably for the regulated community.

The Department will work to educate the regulated community through continued outreach. Specifically, the Department plans to educate all nurseries upon inspection to inform them of the upcoming rule changes. The Department has already begun this education through emailing all nurseries in the state. Further, the Department has worked and will work closely with stakeholder groups to continue to educate Ohio businesses.

Adverse Impact to Business

- 14. Provide a summary of the estimated cost of compliance with the rule. Specifically, please do the following:
 - a. Identify the scope of the impacted business community;

Any person who produces, sells, offers to sell, transports, or plans to transport any of the prohibited plants listed in OAC 901:5-30-01.

b. Identify the nature of the adverse impact; and

No person shall sell, offer for sale, propagate, distribute, import or intentionally cause the dissemination of any invasive plant as defined in paragraph (A) of OAC 901:5-30-01 in the state of Ohio.

c. Quantify the expected adverse impact from the regulation.

The prohibition will not allow the sale of certain plant varieties in the state of Ohio. For some nurseries, revenue from the sale of prohibited plants may be lost. The adverse impact cannot be quantified in terms of dollars due to the variety of business models and levels of stock available at each nursery.

15. Why did the Agency determine that the regulatory intent justifies the adverse impact to the regulated business community?

As stated previous, ORC 901.50 requires the Department to identify invasive plant species and establish the prohibited activities regarding them. Invasive plants are bad for Ohio's environment and native species as they alter Ohio's native biodiversity, changing the way that Ohio's plant and animal life exist.

Further, the phase out period included with some of the prohibited plants will allow nurseries to recoup costs which have already been invested by temporarily allowing for the sale of such plants to decrease inventory rather than requiring immediate destruction. Some crops, such as trees, take years to grow in order to see a profit. These phase out periods will allow these companies to not take a significant loss on their already invested inventory. In addition, during stakeholder outreach, the Department learned that many nurseries have begun to phase out these prohibited plants based on education and research from third party advisory groups. This will help to minimize the impact on the regulated community.

Finally, many of the prohibited species can be replaced by already existing native plants or other non-invasive options. These plants will likely replace a significant amount of the lost potential profit of the new prohibited invasive plants.

For all of the reasons above, the Department believes that the adverse impact is justified when compared with the environmental impact and other entrepreneurial opportunities.

Regulatory Flexibility

16. Does the regulation provide any exemptions or alternative means of compliance for small businesses? Please explain.

Due to the potential environmental and industry impact invasive plants can have and are already having on Ohio native biodiversity, the Department did not create any exemptions or alternative means of compliance for small businesses. However, as indicated above, some of the prohibited species have a phase out period which will allow all businesses to recoup already invested costs by selling/disposing of invasive plants already in their possession.

17. How will the agency apply Ohio Revised Code section 119.14 (waiver of fines and penalties for paperwork violations and first-time offenders) into implementation of the regulation?

The Department works with all offenders to educate them as to requirements and identifying violations to ensure voluntary compliance. First-time offenders are routinely offered settlements that are appropriate to the circumstances of the violation.

18. What resources are available to assist small businesses with compliance of the regulation?

The Department has online resources and has field staff available to provide assistance. Training and seminars are also available via the United States Department of Agriculture.
